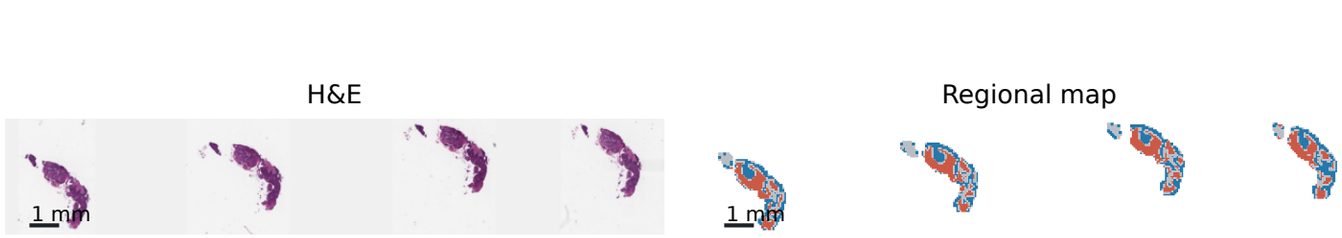

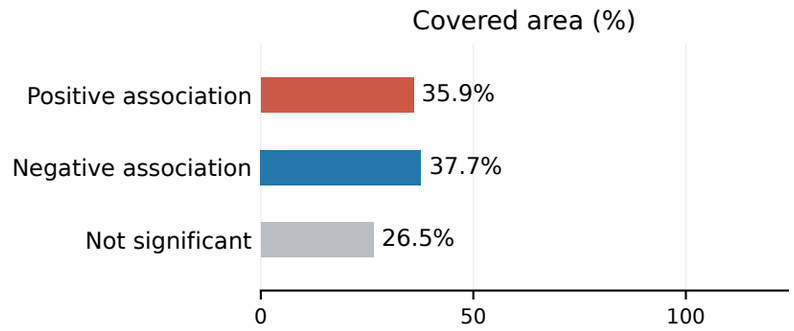

Figure 4 | Public TCGA demonstration of the manuscript spatial layout

H&E, standalone regional map and area percentages. Clinical case categories are unavailable for these public slides.

TCGA-V5-AASV | Public TCGA ESCC

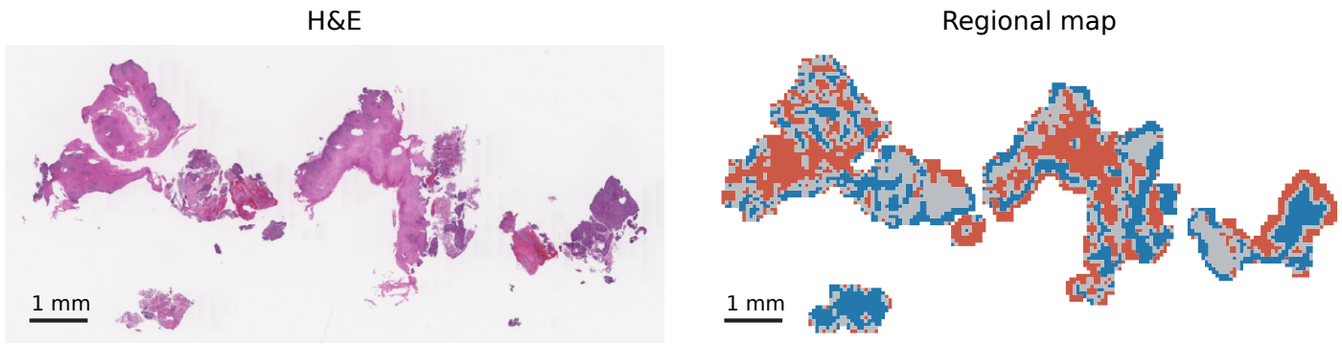

2,577 all segmented tissue patches; illustrative coefficients; no clinical B/NB assignment

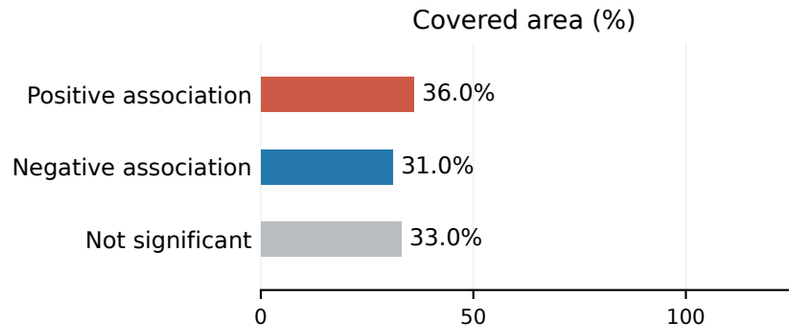

TCGA-V5-A7RC | Public TCGA ESCC

4,127 all segmented tissue patches; illustrative coefficients; no clinical B/NB assignment

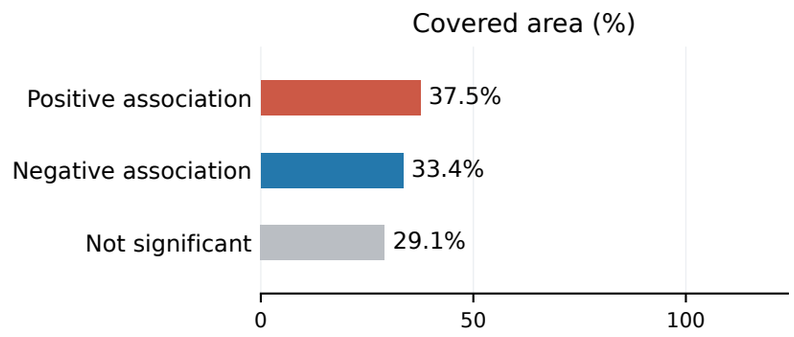

TCGA-LN-A49S | Public TCGA ESCC

9,556 all segmented tissue patches; illustrative coefficients; no clinical B/NB assignment

Area denominator: unique patch-covered area; overlap counted once. White: uncovered. Gray: not significant / not estimable.

Directions are relative to C15. These are regional interaction associations, not local B/NB labels or verified treatment effects.

Coefficients and uncertainty are artificially specified for visualization only. TCGA cluster identities do not match the paper model.
